

## Drive Module – Identification:

This help sheet will allow you to identify your drive chips.

There are 5 types of drive chips used in the Prior controllers, NW1, NW2, NW4, MS, MS+. The NW1 and MS are almost obsolete but can be found in older equipment, OptiScan and ProScan, current ProScan II controllers can have NW2 or MS+ chips and OptiScan II controllers have NW4 chips.

The following pictures show the differences between the drive chips.

There is no visible difference between an MS and an MS+ chip.
